

Our Unique Features

In designing our steel roller shutters, we implemented our extensive knowledge of the latest technologies and 25 years of industry experience. The use of top quality materials combined with excellent workmanship creates Industrial roller shutters that are highly functional, long lasting, and aesthetically appealing. Because every customer's needs are different, we take great care in creating a unique Industrial roller shutter that works not just for anyone, but for you!

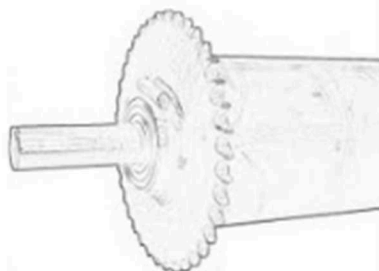

Through efficient manufacturing practices and the relentless efforts of Sprint's exceptional employees, we are proud to offer you a superior product at a price point that is affordable for both small and large businesses.

> End Clips

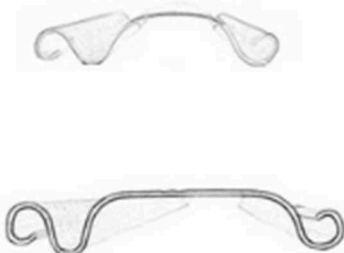

We only use clips molded from DuPont plastics, the highest quality plastic on the market. The material is extremely durable and does not become brittle over time. Each clip provides full coverage of the slats, preventing any slipping or "walking".

> Drums

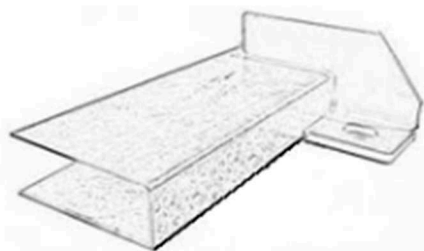

Our drums are precision engineered to prevent any misalignment and unnecessary wear. Each end consists of a solid 1020 bright axle and a sealer roller bearing (with a working clearance bearing to axle of 0.1mm). All drums, no matter what size, are made of a seamless solid wall pipe.

> Profiles

We put much time and thought into choosing the most suitable slat profile. Not only do the slats have to work well, but they should also be interchangeable with other slats available on the market. After much research, we opted for the readily available 75mm and 100mm slats to provide our Doors with reliable performance, while making any future repairs as economical as possible.

> 100mm Track with Heavy Duty Fix

When doors are larger than average or in an exposed area, 100mm Tracks & Heavy Duty Fix will provide you with a long lasting door.
